

Florapeat CKS2

Florapeat CKS2 is a substrate for potted plants. The average structure gives good support to the roots and has a high porosity of air and water to give good aeration in the substrate.

Suitable for a wide range of vegetables, flowers, ornamental plants, house plants, trees, ornamental plants. The substrate is 100% natural, slightly broken ground, with high damping capacity, water and air porosity. The mixture is pH neutral, includes short-term NPK fertilizer with trace elements and wetting agent to help irrigation. To ensure maximum performance and density, we need watering peat before use at the opening of the bag, this improves the decompression proces

BOTANIC CHARACTERISTICS

Sphagnum species Sp
Decomposition H2-H4
Organic matter content 85% Min
Max ash content 15%

CHEMICAL CHARACTERISTICS

pH5,2-6,0
N145-245 mg / l
P205170-280 mg / l
K20190-320 mg / l
CE1.1 mS / cm

PHISYCAL PROPERTIES

Structure 6-20 mm
Density 140-160 kg / m³ or
180-200kg / m³
Absorption 7-8 times its own
weight of dry matter
80 g dry matter / l
Humidity 40-60%
